INFRAESTRUCTURA DE IA PRIVADA

CONFIDENCIAL — SOLO PARA EL DESTINATARIO

PREPARED FOR: GESTORÍAS, ASESORÍAS & DESPACHOS PROFESIONALES — SPAIN

IA Privada para Gestorías El Sistema que Hacienda No Puede Tocar.

60,000 gestorías in Spain are running 1990s software with zero AI tooling. The ones using ChatGPT are violating GDPR — and the AEPD has published guidance saying exactly that. This document outlines the only architecture that gives you AI capability without regulatory exposure.

CONTACTO	SEDE	FECHA

SECTION 01 — THE MARKET REALITY

60,000 Gestorías. Zero AI Tools. One Regulatory Trap.

The gestoría sector is one of the most underserved markets in Spanish professional services. It handles some of the most sensitive financial data in Spain — NIFs, nóminas, declaraciones de la renta, bank statements, cotizaciones — and it is operating almost entirely without modern tooling.

4×

Annual Deadline Crunch Points

JAN 20, APR 20, JUL 20, OCT 20

The technology gap is not a minor inefficiency. A gestoría handling 150 clients is processing thousands of documents per quarter — facturas, nóminas, modelos tributarios, escrituras, contratos — using software built before the internet was mainstream. A3, Sage Despachos, and ContaPlus have not fundamentally changed. The firms using cloud AI as a workaround are creating a GDPR liability that the AEPD has explicitly flagged.

SECTION 02 — THE REGULATORY PROBLEM

The AEPD Has Already Ruled on ChatGPT

This is not a theoretical risk. The Agencia Española de Protección de Datos has published explicit guidance on the use of cloud AI tools with personal data. Using ChatGPT, Claude.ai, or any cloud-based AI with client financial data is a documented violation.

AEPD — AGENCIA ESPAÑOLA DE PROTECCIÓN DE DATOS

Explicit Guidance on Cloud AI with Personal Data

The AEPD has published guidance establishing that using cloud AI tools (ChatGPT, Claude.ai, Microsoft Copilot, etc.) with personal data — including client NIFs, income data, bank account details, tax returns, and employment records — constitutes a breach of **GDPR Article 28** (processor obligations) if proper Data Processing Agreements are not in place, and potentially **Article 44** (international transfers) for US-based providers.

The AEPD began formal investigations into AI provider data flows in 2023. Published guidance updated 2025. Fine enforcement began Q1 2025.

The Regulatory Stack Facing Every Gestoría

RGPD ART. 28 | RGPD ART. 44 | LOPD-GDD | LEY 10/2010 AML | SECRETO PROFESIONAL | AEAT CONFIDENTIALITY

Regulation	What It Covers	Violation When Using Cloud AI	Maximum Penalty
GDPR / RGPD Art. 28	Data processor obligations	No valid DPA with OpenAI/Anthropic for client data processing	€20M or 4% of global turnover

Regulation	What It Covers	Violation When Using Cloud AI	Maximum Penalty
GDPR / RGPD Art. 44	International data transfers	Client NIF/financial data sent to US servers without adequate protection	€20M or 4% of global turnover
LOPD-GDD	Spanish data protection law	Processing client personal data via unauthorised third-party services	€600,000 (serious infraction)
Ley 10/2010 (AML)	Anti-money laundering compliance	Sharing client beneficial ownership / financial data externally	Criminal exposure + firm closure
Secreto Profesional	Professional confidentiality	Disclosure of client data to AI vendor = potential breach	Deregistration, civil liability
AI IBIZA VIP	All of the above	No transmission — full compliance	Zero risk

Data Gestorías Send to Cloud AI Daily

Every time a gestor pastes or uploads this to ChatGPT or Claude.ai:

✗ NIF / CIF of clients and empresas

✗ Nóminas and payroll data

✗ Declaraciones de la Renta (IRPF)

✗ Bank account numbers and statements

✗ Impuesto de Sociedades data

✗ IVA returns (Modelo 303, 390)

✗ Social security (SS) cotización records

✗ Client medical/disability certificates

Why "Enterprise Agreements" Don't Protect You

Even with ChatGPT Enterprise or Claude Team accounts:

✗ Data still processed on US servers

✗ Standard Contractual Clauses inadequate for tax/AML data

✗ CLOUD Act gives US authorities access

✗ AEPD guidance not satisfied by DPAs alone

✗ Client professional confidentiality still breached

✗ No protection against provider data breach

SECTION 03 — THE OPERATIONAL PROBLEM

The Quarterly Crunch: Four Times a Year, Every Year

Every gestoría in Spain operates on the same brutal calendar. Four times a year, hundreds of client files must be completed and submitted. The weeks before each deadline are chaos — WhatsApp overload, manual data entry, staff working nights, and errors that result in recargos and client complaints.

Jan 20

Q4 DEADLINE

IVA trimestral (4T), IRPF retenciones, Modelo 115, Modelo 180 annual summary

Apr 20

Q1 DEADLINE

IVA trimestral (1T), IRPF retenciones, Modelo 303, inicio campaña Renta

Jul 20

Q2 DEADLINE

IVA trimestral (2T), IRPF retenciones, Modelo 303, Impuesto Sociedades (IS)

Oct 20

Q3 DEADLINE

IVA trimestral (3T), IRPF retenciones, Modelo 303, inicio preparación anual

> **What happens in the weeks before each deadline:** Gestores send 200+ WhatsApp messages chasing missing facturas. Staff manually key invoices into A3 or Sage. Senior gestores review documents that a well-configured AI could have pre-processed in seconds. Errors slip through. Hacienda issues requerimientos. Clients receive recargos. The cycle repeats four times a year, every year, getting no better.

The Document Avalanche — What a 150-Client Gestoría Processes Per Quarter

Document Type	Volume (150 clients, per quarter)	Current Processing	Time Spent
Facturas (receipts & invoices)	1,500–3,000 documents	Manual review + key-in	180–240 hours
Nóminas	300–600 per month	Manual processing in A3/Sage	60–90 hours/month

Document Type	Volume (150 clients, per quarter)	Current Processing	Time Spent
Bank statement reconciliation	150-300 statements/quarter	Manual line-by-line matching	40-60 hours
Client emails (info requests)	500+ per month	Manual reading and response	2-3 hours/day
Alegaciones / requerimientos	10-30 per quarter	4-8 hours per alegación	40-240 hours
BOE / normativa monitoring	Continuous	Manual daily scan	30 min/day minimum
Total quarterly admin burden	Thousands of documents	Almost entirely manual	**600+ hours/year**

SECTION 04 — WHAT PRIVATE AI DOES FOR GESTORÍAS

From Document Avalanche to Automated Despacho

Private AI does not replace the gestor. It eliminates the hours-per-day that gestores spend on mechanical tasks — document extraction, drafting standard responses, monitoring regulations — so they can focus on advisory work that actually requires expertise.

01 Document Intelligence: Invoice OCR & Auto-Entry

Upload a batch of facturas — scanned PDFs, photos from WhatsApp, digital invoices. The AI extracts proveedor, NIF, importe, IVA, fecha, and concept. It validates against your client list and flags anomalies. It exports directly in A3/Sage import format. **What takes a staff member 4 hours now takes minutes.**

Before: Manual key-in, 4+ hours/batch

After: Upload & review, 15–20 minutes

02 Alegaciones Drafting: 4–8 Hours to 45 Minutes

When Hacienda sends a requerimiento or propuesta de liquidación, the gestor feeds the document to the AI along with the client file. The AI drafts a complete alegación — citing jurisprudencia, referencing applicable artículos of the LGT, LIRPF, or LIVA, and structuring the argumentación correctly. The gestor reviews and signs. **A task that consumed a full working day now takes under an hour.**

Before: 4–8 hours per alegación

After: 45 minutes including review

03 BOE Monitoring: Automatic Daily Regulatory Watch

The system monitors the Boletín Oficial del Estado daily. It extracts relevant changes to IRPF, IVA, IS, cotizaciones, and professional regulations. It flags items that affect your client portfolio specifically — not generic tax alerts, but targeted analysis of what matters to your despacho's client mix. **No more manual BOE reading. Regulatory changes surface automatically.**

Before: 30+ min/day, or missed entirely

After: Automated summary in morning briefing

04 Client Communications: Auto-Draft Standard Responses

The AI reads incoming client emails and WhatsApp forwarded messages, identifies what is being asked (missing factura, explanation of a liquidación, status update), and drafts a professional response in correct Spanish. The gestor approves and sends. **2 hours of email per day becomes 15 minutes of reviewing drafts.**

Before: 2-3 hours/day reading and writing

After: 15-20 minutes reviewing AI drafts

05 Deductibility Analysis: Maximise Client Outcomes

Feed the client's expense list to the AI. It categorises each item against applicable IRPF/IS deductibility rules, flags expenses that require documentation, identifies opportunities the client has not captured, and produces a structured summary. **Better outcomes for clients, achieved faster, with less senior time.**

Before: Senior gestor reviews manually

After: AI pre-analyses, gestor validates

SECTION 05 — RETURN ON INVESTMENT

A 150-Client Gestoría: The Numbers

These calculations use conservative hourly cost estimates for administrative staff in a typical Spanish gestoría. Your actual numbers may be higher depending on staff seniority and billing rates for advisory work.

ROI Model — 150-Client Gestoría, Year 1

Task	Hours Saved / Year	Hourly Staff Cost	Annual Saving
Invoice OCR & data entry	300 hrs	€20/hr	€6,000
Bank reconciliation	80 hrs	€20/hr	€1,600
Client email drafting	200 hrs	€25/hr	€5,000
Alegaciones drafting	100 hrs	€35/hr (gestor time)	€3,500
BOE monitoring & summarizing	60 hrs	€30/hr	€1,800
Document search & retrieval	80 hrs	€20/hr	€1,600
Total	**820 hrs / year**	—	**€19,500 / year**

Additional Value (Not in ROI Table)

→ AEPD fine avoidance (€600K–€20M potential)

→ Fewer client errors = fewer recargos to explain

The Capacity Math

If a gestor recovers 820 hours per year, that is equivalent to:

At 5.5 hrs/client/quarter	37 additional clients

→ Ability to take on more clients without more staff

→ Senior gestor time freed for advisory (higher margin)

→ Staff retention: less burnout around deadlines

→ Competitive differentiation in client acquisition

At €600 avg annual revenue/client	€22,200 new revenue
Current cost saving	€19,500/year
Combined Year 1 Impact	**€41,700+**

SECTION 06 — ARCHITECTURE COMPARISON

Cloud AI vs. Private AI for Spanish Gestorías

Criterion	CLOUD AI (CHATGPT, COPILOT, CLAUDE.AI)	AI IBIZA VIP — PRIVATE AI
AEPD / GDPR compliance	VIOLATION — guidance is explicit	FULLY COMPLIANT — no data leaves
Client NIF data leaves despacho	YES — every query	NEVER
Can train on your data	POTENTIALLY — depends on agreement	NO — model fixed, local, owned by you
Works with A3 / Sage data export	Manual paste / upload (risky)	Native integration configured on setup
Knows Spanish tax law	Generic — not specialized	Fine-tuned on Spanish tax corpus
Understands IRPF / IVA / IS structure	Partial — training data varies	Specifically configured for gestoría workflows
Secreto profesional maintained	NO — third-party disclosure	YES — no disclosure to any party
Works during internet outage	NO — dead in a blackout	YES — fully offline capable
Monthly cost	€25–€40/user/month ongoing forever	Zero after hardware purchase
Audit trail for AEPD inspection	External logs you cannot control	Local logs under your control

Outcomes: Before and After Private AI

Process	Before (Current State)	After (Private AI)	Change
Document processing (invoices, bank, nóminas)	600 hours / year	150 hours / year	-75%
Alegaciones drafting	4-8 hours per filing	45 minutes per filing	-85%
BOE / regulatory monitoring	Manual daily — or missed	Automated daily briefing	Fully automated
Client email responses	2-3 hours per day	15-20 minutes reviewing drafts	-85%
Deadline crunch intensity	All-hands crisis every 3 months	Manageable workload	Eliminated
Client errors / recargos	Occasional (stress-related)	Dramatically reduced	Near-zero
AEPD regulatory exposure	HIGH (if using cloud AI)	ZERO	Eliminated

SECTION 07 — THE SYSTEM

What We Deliver to Your Despacho

We do not sell SaaS subscriptions. We do not sell cloud access. We ship a hardware system to your despacho, install it, configure it for your specific client mix and software environment, and hand it to you. It is yours.

01	02	03	04
HARDWARE	INSTALACIÓN	CONFIGURACIÓN	SOPORTE
Servidor enviado a tu despacho	Setup guiado remoto o presencial	A3/Sage integration, Spanish tax corpus, client data	30 días de soporte incluidos

Included in Every Gestoría Deployment

AI Inference Server	GPU hardware, multiple concurrent gestores
Spanish Tax AI Model	Pre-trained on IRPF, IVA, IS, LGT corpus
Document OCR Layer	Factura extraction, bank statement parsing
A3 / Sage Export Integration	Outputs in format compatible with your software
BOE Monitoring	Daily automated regulatory watch
Client Base Import	Your client profiles loaded for context

Tiers by Despacho Size

Tier	Clients / Gestores	Key Features
Básico	Up to 75 clients 1-3 gestores	Core OCR, alegaciones, client comms
Profesional	75-200 clients 3-8 gestores	+ BOE monitoring, A3 integration, multi-user
Despacho	200+ clients 8+ gestores	+ Multi-office, API, advanced automation

Local Web Interface	LAN-only access, no internet needed
Audit Logs	All queries logged locally for AEPD compliance

One-time cost. No subscriptions. No per-query charges. Hardware is yours. No vendor can switch you off.

Gee Van Donselaar — Fundador: "I run this system myself in my data centre in Thailand. Every document that passes through my work stays on hardware I control. I built it because cloud AI was never an option for serious confidential work. I now make the same infrastructure available to gestorías that understand why that matters."

SECTION 08 — FIT CRITERIA

Which Gestorías This Is For

This is right for your despacho if...

✓ You handle 50+ clients with recurring quarterly work

✓ You or your staff are already using ChatGPT with client data

✓ Your team loses nights and weekends before cada campaña

✓ You want AI productivity gains without AEPD risk

✓ You use A3 or Sage and want better integration

✓ You want to grow client base without adding headcount

✓ You take client confidentiality and professional obligations seriously

This is not right for you if...

✗ You are happy with cloud AI and unconcerned about AEPD guidance

✗ You want a monthly SaaS with minimal upfront investment

✗ You have fewer than 30 clients and very low document volumes

✗ You cannot allocate any staff time to initial onboarding

✗ You are looking for free tooling or minimal-commitment pilot

Gestoría Types With Highest ROI

Gestoría Type	Primary AI Use Case	Key Regulatory Risk Without Private AI	Annual Value Driver
Gestoría fiscal / asesoría fiscal	Alegaciones, deductibility, IRPF prep	Client income data, IRPF to US servers	400+ hrs/year recovered

Gestoría Type	Primary AI Use Case	Key Regulatory Risk Without Private AI	Annual Value Driver
Gestoría laboral	Nóminas processing, SS cotizaciones	Employee nómina data — highly sensitive	High volume = massive time saving
Asesoría contable	Invoice OCR, bank reconciliation	Full financial picture sent externally	Quarterly crunch nearly eliminated
Gestoría administrativa (tráfico, extranjería)	Document processing, client communication	Personal documentation, residency data	Client throughput significantly increased
Full-service gestoría	All of the above	Entire client financial/legal profile at risk	Largest aggregate return

SECTION 09 — NEXT STEP

Book a 45-Minute Call

We run technical conversations, not sales pitches. In 45 minutes, we will assess your current workflow, identify where AI recovers the most time in your specific despacho, confirm whether your current AI usage creates AEPD exposure, and outline exactly what a private AI deployment would cost and deliver for you.

RESERVAR LLAMADA

WhatsApp: +66 80 223 7720

Send us a WhatsApp message with your gestoría name, approximate number of clients, and whether you are currently using any cloud AI tools. We will respond within 24 hours to schedule a call at a time that works for your timezone.

RESPUESTA	DURACIÓN	COSTE	IDIOMA
En 24 horas	45 minutos	Gratuito	English / Español

About AI IBIZA VIP

AI IBIZA VIP is a private AI infrastructure company based in Thailand with worldwide clients. We specialize in self-custodial AI systems — hardware and models that run on your premises, under your control, processing your clients' data without ever transmitting it anywhere.

The Regulatory Reference Stack

RGPD Art. 28	Processor obligations — DPA required for AI vendor
RGPD Art. 44-49	International transfers — US servers require SCCs
LOPD-GDD	Spanish national data protection law

We have deployed systems for professional services firms across Europe, Southeast Asia, and the Americas. The gestoría sector in Spain is one of the highest-value opportunities we have encountered: high document volumes, clear regulatory risk from cloud AI adoption, and almost no dedicated tooling.

Ley 10/2010	AML — professional client data obligations
AEPD Guidance	Explicit ChatGPT / cloud AI guidance published
